

DP-305945 (DEL01 P-391)

Abstract of the Disclosure

A speech navigation system provides for speech navigation of a voice mail system. Upon establishment of a communication link between the speech navigation system and the voice mail system, the speech navigation system may receive a voice command. Upon receiving a voice command, the speech navigation system associates the voice command to at least one keypad character. The speech navigation system then provides a telephone dialing tone, which corresponds to the at least one associated keypad character, to the voice mail system.
